

NimbusGrid

AI-driven load balancing for industrial battery storage

Problem

- Grid-storage operators dispatch manually
- Wasted energy and revenue at every site
- Operators lack real-time optimization

Solution

- Real-time AI dispatch across storage sites
- Reduces grid-storage operating costs by 30%
- Drop-in software, no hardware changes

Product

- Cloud platform + on-site agent
- Forecasting + dispatch optimization engine
- Live dashboards and alerts

Market

- Grid-storage software TAM of \$48B by 2030
- Driven by renewables + storage buildout

Traction

- \$1.2M ARR
- 8 enterprise pilots
- 2 signed multi-year contracts

Business model

- Per-site SaaS subscription
- Usage-based optimization fees

Competition

- Stem Inc and Fluence named as competitors
- We claim: no direct competitor offers real-time AI dispatch

Team

- Dana Okafor - CEO & Co-founder (ex-software, B2C)
- Marc Liang - CTO & Co-founder (ML, ex-adtech)

Ask

- Raising \$4M seed at \$20M post-money
- 18 months runway; hire sales + 2 ML engineers
